OVERVIEW

CEO'S LETTER TO SHAREHOLDERS

Dear fellow shareholders,

I am pleased to report that our Company performed well in the first quarter of the year. Our revenue increased year-on-year by EUR 2.9 million, or 38%, to EUR 10.7 million and our adjusted net profit increased by EUR 5 million, or 94%, to EUR 10.3 million. We increased the total size of our mature plantations by 3,862 ha, or 21%, to 22,229 ha. In addition, our average gross margin was one percentage point higher than last year, despite the economic growth in China in the first quarter this year being significantly below that of the first quarter last year.

The sharp increase in the adjusted net profit was partly a result of the additional output generated from previously immature plantations maturing during the period and partly due to a significant increase in finance income as a consequence of the appreciation of the RMB against the EUR, which contributed EUR 3.6 million to the bottom line. Excluding the currency gain, our adjusted net profit increased by EUR 1.4 million, or 26%, to EUR 6.7 million.

As we have previously communicated, we have paid particular attention to the bamboo-based pulp and paper industry. After evaluating various alternatives, we entered into a strategic partnership with Shaowu Zhongzhu Pulp and Paper Co. Ltd ('Shaowu Zhongzhu') on 18 February. Shaowu Zhongzhu is one of the leading bamboo based pulp and paper producers in China with an annual production capacity of around 100,000 tons. The company is located in Shaowu City in Fujian province, close to many of Asian Bamboo's plantations.

As part of the strategic partnership, we will be the prime supplier of bamboo trees used as raw material for the production of the company's pulp and paper. In addition, we will support Shaowu Zhongzhu's business development by providing management support and expertise. We believe that the strategic partnership with Shaowu Zhongzhu will increase the demand for our bamboo trees, which we expect will lead to higher prices for bamboo trees in the future.

Despite the exceptionally high adjusted net profit margin achieved in the first quarter, the Management Board will not make any change to the Company's guidance at the moment as the Management Board deems it too difficult to forecast the RMB/EUR exchange rate at the end of the year. However, there are many reasons to maintain a positive outlook. Despite the economic downturn, both the demand side for our products and the pricing situation have remained firm. Furthermore, there are now signs, such as increased lending and higher industrial output, suggesting that the Chinese economy may improve in the second half of the year. The Management Board will update the Company's guidance in the Q2 2009 Interim Report.

In addition to the 22,229 ha of mature plantations we currently possess, we have 4,400 ha of immature plantations which are in the process of becoming mature as well as a concrete and detailed plan to lease an additional 10,000 ha of mature plantations by 2010. As a result, compared to the end of 2008, we are on course to double the size of our plantations generating an output by 2011, which we expect will lead to a corresponding increase in revenue and adjusted net profit.

Best regards,

LIN ZUOJUN
FOUNDER AND CEO

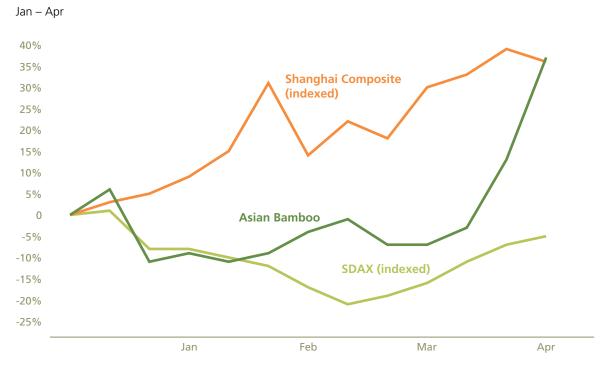

OVERVIEW

THE ASIAN BAMBOO SHARE

As a result of a combination of factors, including a rebound in global equity markets, our strong performance and an increased interest in our company and business model, our share price rebounded and we outperformed the SDAX-index in the first

quarter of the year. In addition, we have won widespread praise in the media for our management execution and future growth potential.

SHARE PRICE AND RELEVANT INDEX COMPARISON CHART

MACRO-ECONOMIC OUTLOOK

In recent years, we have seen a change in consumer preferences towards sustainable materials. Bamboo wood has developed into a symbol of environmental sustainability and we continue to see bamboo being used in new applications, which has supported demand and pricing for our bamboo trees.

At the same time, organic vegetables have grown in popularity. As bamboo shoots are organically grown, delicious and nutritious, we have seen a sharp increase in demand in recent years. In addition, bamboo shoots, which have traditionally mainly been eaten in the south-eastern parts of China, are gaining in popularity all across the country as a result of rising living standards and a growing interest in quality food.

The strength of the demand for our products was shown last year when we increased the size of our mature plantations and output by around 200%. Despite last year being a difficult year, this did not result in a drop in our prices.

We are also helped by the support given by the government. The central government is concerned with protecting natural resources, improving the ecological balance, boosting economic development in rural areas and increasing farmers' incomes. Therefore, the government at various levels is supportive of the agriculture industry in general and the bamboo industry in particular, through tax incentives and favourable policies.

There has recently been some encouraging data released by the Chinese authorities showing that the domestic banks are increasing their lending and that industrial activity has increased. Therefore, it is possible that we will see a rebound in growth in the second half of the year, which would further support demand and prices for our products. Longer term, we believe that we will continue to benefit from the general rise in prices of agricultural products driven by strong Chinese and global demand.

SPRING SHOOTS

Fresh spring shoots, as shown on the picture above, were our second largest product category in terms of revenue in Q1. Spring shoots are primarily harvested in March and April and sold fresh or processed. In terms of volume, we are selling much more spring shoots than winter shoots.

GROUP INTERIM
MANAGEMENT REPORT

OUR PLANTATIONS

In ha	31 March 2009	31 December 2008	Change
Mature plantation size	22,229	18,367	21%
Immature plantation size	4,400	8,262	-47%
Total plantation size	26,629	26,629	_

The Company did not lease any additional plantations during the period, however two plantations which were previously classified as immature plantations, Sanming and Shunchang, were reclassified as mature as they started generating output. Consequently the total size of our mature plantations increased by 3,862 ha, or 21%, to 22,229 ha compared to the end of last year.

During the period, agreements related to plantation leases entered into prior to the Company's IPO were rearranged from yearly payments to up-front payments for the entire lease period, in-line with the lease-terms of recent plantation leases. Hence, all our lease agreements are now structured as up-front payments for the entire lease period, which reduces the total amount of the lease-fees. In the first quarter, the total capital expenditure for re-arranging these lease agreements amounted to around EUR 16.4 million and they are classified as long-term prepayments in the balance sheet.

We are planning to lease an additional 3,000 ha of plantations later in 2009 and an additional 7,000 ha of plantations in 2010. By 2011, we expect to have more than 36,000 ha of mature plantations, all generating output. As for our plans from 2011 and onwards, we will give an update later on during the year.

In ha	Mature	Immature	Total	New leases*
31 December 2008	18,376	8,262	26,629	_
31 December 2009F	22,229	7,400	29,629	3,000
31 December 2010F	29,628	7,000	36,628	7,000
31 December 2011F	36,628	TBC	36,628	TBC

^{*} New plantation leases generally generate limited or no output the first year of the lease as some preparation work needs to be carried out before harvesting can begin. From an accounting point of view, new leases are therefore generally classified as immature plantations the first year.

REVENUE

	31 March 2009	31 March 2008	Change
Revenue (kEUR)	10,722	7,764	38%

During the period, revenue increased by EUR 2.9 million, or 38%, to EUR 10.7 Million (2008 = EUR 7.8 million). The main reasons for the growth in revenue were the higher output generated by an increase in the total size of our mature plantations and an increase in the value of the RMB against the EUR. Despite the economic slowdown during the period, both demand and prices for both our fresh and processed shoots remained firm. Sales of all product categories increased, with fresh winter shoots and processed shoots increasing the most.

Combined, sales of fresh winter shoots and fresh spring shoots, which are sold domestically at agriculture markets, accounted for 85% of total revenue. Sales of processed shoots were split between exports to the Japanese market, which accounted for around 7% of total revenue, and sales to domestic industrial customers and supermarkets, accounting for around 6.5% of total revenue. During the period, we also sold a small quantity of bamboo trees to Shaowu Zhongzhu, a paper mill with which we entered into a strategic partnership on 18 February.

REVENUE BREAKDOWN (kEUR)

Category	Q1 2009	Q1 2008	Change
Fresh winter shoots	5,219	3,530	48%
Fresh spring shoots	3,897	3,326	17%
Sub-total fresh shoots	9,116	6,856	33%
Processed shoots	1,444	908	59%
Bamboo trees	162	_	N/A

PRODUCT MIX BREAKDOWN

Q1 2009

Q1 2008

RESULTS OF OPERATIONS, NET WORTH AND FINANCIAL POSITION

In kEUR unless otherwise stated	31 March 2009	31 March 2008	Change
Gross profit	7,398	5,291	40%
Gross profit margin	69%	68.1%	-
Profit	10,282	1,642	526%
Adjusted net profit	10,282	5,301	94%

Cost of sales increased by EUR 0.8 million, or 34%, to EUR 3.3 million (2008 = EUR 2.5 million). The increase is slightly lower than the increase in revenue.

The gross profit margin increased by around 1 percentage point to 69% (2008 = 68.1%).

The profit increased by EUR 8.7 million, or 526%, to EUR 10.3 million (2008 = EUR 1.6 million). The main contributors to the higher profit this quarter compared to the same quarter last year were mainly:

- An increase in gross profits by EUR 2.1 million
- An increase in finance income, caused by currency gains, of EUR 3.2 million
- A decrease in income tax by EUR 3.9 million

The increase in gross profit was a result of higher revenue and a slightly higher gross profit margin.

The increase in finance income was a result of the appreciation in the value of the RMB against the EUR. As Hong Kong XRX

Investment Co. Ltd. ("Hong Kong XRX") holds an account payable against Asian Bamboo AG of EUR 65 million, any change in the EUR/RMB exchange rate results in a corresponding increase or decrease in the account payable calculated in RMB, which is the currency in which the balance sheet of Hong Kong XRX is calculated. The increase or decrease is attributable to the consolidated statement of income and expenses and in the period, as the RMB increased sharply against the EUR, the calculated gain was around EUR 3.2 million.

The main reason for the sharp decrease in income tax is the following: Last year, the Company changed the applicable tax rate for the calculation of deferred tax on gains in biological assets from 15% to 25%, which is the highest possible tax rate, resulting in a EUR 3.6 million increase in deferred tax in Q1 2008. This year, the Company has not made any changes to the applicable tax rate and the valuation of the biological assets will be conducted in the fourth quarter, therefore no deferred tax has been charged year to date.

NET WORTH

In kEUR unless otherwise stated	31 March 2009	31 December 2008
Total assets	192,770	170,631
Cash and cash equivalents	17,071	25,481
Total equity	167,137	155,235
Total liabilities	25,633	15,397

Total assets increased by EUR 22.2 million, or 12%, to EUR 192.8 million (2008 = EUR 170.6 million), mainly due to an increase in retained earnings by EUR 10.3 million and an increase in other payables, accruals and provisions by EUR 7.3 million.

Cash and cash equivalents decreased by EUR 8.4 million, or 33%, to EUR 17.1 million, as the Company spent a total of EUR 16.4 million on re-arranging plantation lease agreements from yearly payments to up-front payments for the entire lease period, which was mainly financed by the retained earnings in the period and the Company's cash position.

GROUP FINANCIAL POSITION

Cash and cash equivalents decreased by EUR 8.4 million, or 33%, to EUR 17.1 million.

The cash outflow used in investing activities was EUR 16.4 million (2008 = EUR 20.5 million), which was primarily used for financing the re-arrangement of plantation lease agreements.

Net cash generated from operating activities was EUR 10.1 million (2008 = EUR 3 million).

The company had EUR 1.4 million in bank loans as of 31 March 2009.

Overall, the Company's financial position remains very strong given the sizeable cash balance, strong operational cash flow and limited debt.

INVESTMENTS

During the period, the Company made long-term prepayments on plantations leases of EUR 16.4 million.

EMPLOYEES

The number of employees decreased by 38, or 5%, to 686 (2008 = 724). The number of employees will increase in the

second quarter when the peak season for the raw processing of spring bamboo shoots begins.

RISK MANAGEMENT

For more information on the risks the Company is exposed to and the Company's risk management policy, please refer to the Risk Report section in the Company's recently published annual report.

There were no significant changes in opportunities and risks in the first quarter.

OUTLOOK

Our integrated strategy remains unchanged and for a deeper analysis of our operating environment and strategic direction, we refer to the Group Management Report on pages 24-35 in our recently published annual report. In summary, our growth strategy consists of the following key elements:

- Increasing the size of our mature plantations
- Deepening our involvement in the value added industries
- Brand building and expansion of distribution channels
- Maximising our product mix

Despite the recent weakness in China's GDP growth, the demand side for our products and the pricing situation have remained firm year to date. As for the rest of the year, given the encouraging signs shown in recent official economic statistics, we expect average prices for our products to at least remain stable compared to last year.

We have around 3,900 ha of previously immature plantations which have started generating an output this year, which has led to an increase in the mature plantation size by 21% compared to last year. We expect our turnover and adjusted net profit to increase at least correspondingly, not taking any currency effects into account.

We have guided for a turnover of EUR 55 million and an adjusted net profit margin of at least 40%. Despite the exceptionally high adjusted net profit margin achieved in the first quarter the Management Board will not make any change to the Company's guidance at the moment as the Management Board deems it too difficult to forecast the RMB/EUR exchange rate at the end of the year.

In addition to the 22,229 ha of mature plantations we currently possess, we have 4,400 ha of immature plantations which are in the process of becoming mature as well as a concrete and detailed plan to lease an additional 10,000 ha of mature plantations by 2010. As a result, we are on course to double the size of our plantations generating an output by 2011, compared to the end of 2008, which we expect will lead to a corresponding increase in revenue and adjusted net profit.

The Management Board will propose a dividend, in line with the Company's profitability in 2009, to be distributed in 2010.

PROCESSED SHOOTS

A part of our spring shoot harvest goes through a cooking and sterilisation process and is then cut, sliced or shredded before either being canned or vacuum sealed. The processed shoots can be stored and sold at a later stage. It is the only product that we export.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

for the quarter ending 31 March 2009

GENERAL

The interim consolidated financial statements for the period 1 January 1 to 31 March 2009, comprise all subsidiaries of Asian Bamboo AG. These subsidiaries are located in China (PRC) except for the interim holding company, Hong Kong XRX Bamboo Investment Co., Ltd., Hong Kong.

BASIS OF PREPARATION

The interim consolidated financial statements were prepared in accordance with International Financial Reporting Standards (IFRS) as adopted by the EU as of the balance sheet date, and the additional requirements of German commercial law pursuant to sec. 315a (1) HGB ('Handelsgesetzbuch'; German Commercial Law Code). The interim consolidated financial statements comply with IFRS.

The preparation of financial statements in conformity with IFRS requires management to exercise judgment in the process of applying the Group's accounting policies and requires the use of accounting estimates and assumptions. The main areas in which estimates are used are the fair value of biological assets and deferred tax liabilities. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period or in the period of the revision and future periods if the revision affects both current and future periods. The financial statements are significantly affected by the valuation of biological assets and related long-term prepayments which account for approximately 81% of total assets.

With regard to the preparation of the interim consolidated financial statements in accordance with IAS 34 'Interim Financial Reporting', the Management Board is required to make estimates and judgments which influence the application of accounting policies within the Company and the reporting of assets and liabilities as well as income and expenses. Actual amounts can differ from these estimates.

SIGNIFICANT ACCOUNTING POLICIES

The accounting policies applied by the Group in the interim consolidated financial statements generally correspond to the methods applied by Asian Bamboo AG in its consolidated financial statements for the year ending 31 December 2008. For further details reference is made to these consolidated financial statements, which can be found in the notes of the Company's annual report at www.asian-bamboo.de.

Income that may have been recorded during the reporting period for seasonal reasons, due to cyclical developments, or only occasionally, is not cut off in the interim consolidated financial statements. Expenses that are incurred irregularly during the reporting period have been cut off in those cases where they would also be cut off at year end.

As far as the valuation of the biological assets is concerned, such a valuation did not take place for the purpose of the Q1 2009 interim report as the valuation process is a very time consuming and expensive task. Thus there are no changes in the fair value less estimated point-of-sale costs of biological assets in the first quarter of 2009 compared to the year-end figures 2008.

FUNCTIONAL AND PRESENTATION CURRENCY

The presentation currency is EUR.

The management has determined the currency of the primary economic environment in which the Group operates to be Renminbi ('RMB').

The following exchange rates from RMB to EUR have been applied:

	Q1 2009	2008	Q1 2008
	RMB/EUR	RMB/EUR	RMB/EUR
31 March	9.0942	9.4956	11.0874
Average for the first quarter	8.9210	10.2236	10.7361

OTHER

A tax rate of 25% is being used for the calculation of deferred tax on gains in the fair value less estimated point-of-sale costs of biological assets.
